Welcome to the 1st ICOIACT 2018

The emergence of Intelligent Systems Technology as a ubiquitous platform for innovations has laid the foundation for the rapid growth of the Information in the future innovation. The purpose of the 1st ICOIACT 2018 is to promote discussion and interaction among academics, researchers, and professionals in the field of information and technologies. In this conference, the author types that we got came from a student, academia, and government. We deeply thank the authors for their participation and high contribution in this conference.

The theme of The 1st ICOIACT 2018 "Opportunities and Challenges on Intelligent Systems Future Innovation"

The 1st ICOIACT 2018 (ICOIACT 2018) held on 6-7 March 2018 in Grand Zuri, Yogyakarta, Indonesia.

This conference provides an international forum for the presentation and showcase of recent advances on various aspects of ubiquitous technology. It will reflect the state-of-the-art of the methods, involving theory, algorithm, numerical simulation, error and uncertainty analysis and/or novel application of new processing techniques in engineering, science, and other disciplines related to ubiquitous computing. In this conference, several topics on the specific themes for intensive discussions are also planned according to the areas of interest.

We would like to extend our gratitude to the Technical Program Committee that has been reviewed the papers and conducted very interesting conference program as well as the invited and plenary speakers.

Finally, we would like to thank the steering committee members, the conference chairman, the organizing committee, the IEEE Student Branch of Universitas Amikom Yogyakarta, and the financial support from the conference sponsors that conducted the success of The 1st ICOIACT 2018.

The Editor of The 1st ICOIACT 2018

2018 International Conference on Information and Communications Technology (ICOIACT)

Parallel Session 1-A & 1-B

<i>A Novel Electrically Tunable IMSL Phase Shifter Based on LC for X-band Microwave Applications</i> Odai H. Raheem (Harbin Institute of Technology, P.R. China), JiaHui Fu (Harbin Institute of Technology, P.R. China)	1
<i>A New Electrically Tunable Frequency for ?-Shaped Microstrip Patch Array based on N-LC Featuring Dual-Band Dual-Beam</i> Odai H. Raheem (Harbin Institute of Technology, P.R. China), JiaHui Fu (Harbin Institute of Technology, P.R. China)	6
<i>Management of fault tolerance and traffic congestion in cloud data center</i> Humphrey Emesowum (University of Portsmouth, United Kingdom (Great Britain))	10
<i>Design and analysis of feedback control system</i> Shibli Nisar (NUCES-FAST & NUCES-FAST, Pakistan)	16

Parallel Session 1-C

<i>Recommendation System for Property Search Using Content Based Filtering Method</i> Tessy Badriyah (Electronic Engineering Polytechnic Institute of Surabaya, Indonesia), Iwan Syarif (Politeknik Elektronika Negeri Surabaya (PENS), Indonesia), Wiratmoko Yuwono (Politeknik Elektronika Negeri Surabaya, Indonesia), Sefryan Azvy (Politeknik Elektronika Negeri Surabaya (PENS), Indonesia)	25
<i>Query Algorithm Optimization with TempTable on Employee Pages Module Knowledge Management System</i> Karto Iskandar (BINA NUSANTARA University, Indonesia)	30
<i>Combined Economic Emission Dispatch with Cubic Criterion Function Considering Various Price Penalty Factor Using Cuckoo Search Algorithm</i> Muhammad Khalil (Institut Teknologi Sepuluh Nopember, Indonesia), Rony Seto Wibowo (Institut Teknologi Sepuluh Nopember, Indonesia), Ontoseno Penangsang (Institut Teknologi Sepuluh Nopember Surabaya, Indonesia)	36
<i>Measuring The Quality of Various Version an Object Oriented Software Utilizing CK Metrics</i> Iwan Binanto (Sanata Dharma University, Indonesia)	41

Parallel Session 1-D

<i>Classification of Cell Types In Acute Myeloid Leukemia (AML) of M4, M5 and M7 Subtypes With Support Vector Machine Classifier</i> Andika Setiawan (Universitas Gadjah Mada, Indonesia), Agus Harjoko (Universitas Gadjah Mada, Indonesia), Tri Ratnaningsih (Universitas Gadjah Mada, Indonesia), E Suryani (University of Sebelas Maret, Indonesia), Wiharto Wiharto (Universitas Sebelas Maret, Indonesia), Sarngadi Palgunadi (Sebelas Maret University, Indonesia)	45
<i>Indonesian Traffic Sign Detection and Recognition Using Color and Texture Feature Extraction and SVM Classifier</i> Isna Fauzia Rahmah (Malang State Polytechnic, Indonesia), Cahya Rahmad (State Polytechnic of Malang, Indonesia), Rosa Asmara (State Polytechnic of Malang, Indonesia)	50
<i>Leaf Morphological Feature Extraction Based on K-Nearest Neighbor</i> Muhamad Hardi (Universitas Dian Nuswantoro, Indonesia), Muhammad Nur Firdaus (Universitas Dian Nuswantoro, Indonesia), Bayu Putra Pamungkas (Universitas Dian Nuswantoro, Indonesia), Usman Sudiby (Universitas Dian Nuswantoro, Indonesia), Christy Atika Sari (Dian Nuswantoro University, Indonesia), Yani Parti Astuti (Dian Nuswantoro University, Indonesia), Eko Rachmawanto (Universitas Dian Nuswantoro, Indonesia)	56
<i>Bas Relief Image Enhancement</i> Karina Auliasari (National Institute of Technology (ITN Malang), Indonesia), Mira Orisa (National Institute of Technology (ITN Malang), Indonesia)	62

Opening Ceremony + Key Note Speakers

<i>Enhancing Generality of Meta-Heuristic Algorithms through Adaptive Selection and Hybridization</i> Kamal Z Zamli (Universiti Malaysia Pahang, Malaysia)	67
<i>Animation Opportunities of Intelligent Multimedia Systems in Developing a Creative Economy Park</i> Mohammad Suyanto (Universitas AMIKOM Yogyakarta, Indonesia), Ferry Wahyu Wibowo (Universitas AMIKOM Yogyakarta, Indonesia)	72

Parallel Session 2-A

<i>Wireless Service at Public University: A Survey of Users Perception on Security Aspects</i> Arif Ridho Lubis (Politeknik Negeri Medan, Indonesia), Ferry Fahrizal (Politeknik Negeri Medan, Indonesia), Muharman Lubis (Telkom University, Indonesia), Hatim MohamadTahir (Universiti Utara Malaysia & School of Computing, Malaysia)	78
<i>Geolocation Prediction in Social Media Data Using Text Analysis: A Review</i> Muhammad Nur Yasir Utomo (Universitas Gadjah Mada, Indonesia), Teguh Bharata Adji (Universitas Gadjah Mada, Indonesia), Igi Ardiyanto (Universitas Gadjah Mada & Faculty of Engineering, Indonesia)	84

<i>Context-Based Awareness in Location Recommendation System to Enhance Recommendation Quality: A Review</i> Sulis Setiowati (University of Gadjah Mada, Indonesia), Teguh Bharata Adji (Universitas Gadjah Mada, Indonesia), Igi Ardiyanto (Universitas Gadjah Mada & Faculty of Engineering, Indonesia)	90
<i>A Study On The Road Accidents Using Data Investigation And Visualization In Los Baños, Laguna, Philippines</i> Jonardo Asor (Technological Institute of the Philippines, Philippines), Gene Marck Catedrilla (Technological Institute of the Philippines, Philippines), Jheanel Estrada (Technological Institute of the Philippines, Philippines)	96
<i>Study on Odometry Sensor Alternative using 3D LiDAR for Urban Area Application</i> Abdurahman Dwijotomo (Universiti Teknologi Malaysia, Malaysia), Hatta Ariff (Universiti Teknologi Malaysia, Malaysia)	102
<i>Comparison Performance Between Rare Event Weighted Logistic Regression And Truncated Regularized Prior Correction On Modelling Imbalanced Welfare Classification In Bali</i> Sony Puji Triasmoro (Institut Teknologi Sepuluh Nopember & Badan Pusat Statistik, Indonesia), Vita Ratnasari (Institut Teknologi Sepuluh Nopember Surabaya, Indonesia), Agnes Rumiati (Institut Teknologi Sepuluh Nopember, Indonesia)	108
<i>An Analysis and a Comparative Study of Cryptographic Algorithms Used on the Internet of Things (IoT) Based on Avalanche Effect</i> Khumbelo Difference Muthavhine (University of South Africa, South Africa), Sumbwanyambe Mbuyu (University of South Africa, South Africa)	114
<i>Analysis of Evaluation Quality Website From Developers Perspective For Build Website</i> Dwi Rahayu (Universitas Amikom, Indonesia), Emma Utami (STMIK AMIKOM Yogyakarta, Indonesia), Emha Taufiq Luthfi (Universitas AMIKOM Yogyakarta, Indonesia)	120

Parallel Session 2-B

<i>360 Degree View of Employee design to get to Know Your Employee from every angel on Blood Transfusion Unit PMI Tangerang District</i> Oleh Soleh (STMIK Raharja, Indonesia), Hani Ariessanti (Perguruan Tinggi Raharja, Indonesia), Indrianingrum Ningrum (STMIK Raharja, Indonesia), Yuliawan Wawan (Univrsitsa Budi Luhur, Indonesia)	125
<i>Application of Bayesian Network Model in Determining the Risk of Building Damage Caused by Earthquakes</i> Devni P Sari (Universitas Gadjah Mada & Universitas Negeri Padang, Indonesia)	131
<i>Web-Based Geographic Information System for School Mapping and Disaster Mitigation</i> Yuliana Ariyanti (Universitas Sebelas Maret, Indonesia), Rosihan Yuana (Sebelas Maret University, Indonesia), Aris Budianto (Universitas Sebelas Maret, Indonesia)	136
<i>Improving Accuracy of C4.5 Algorithm Using Split Feature Reduction Model and Bagging Ensemble for Credit Card Risk Prediction</i> Much Aziz Muslim (Universitas Negeri Semarang, Indonesia), Aldi Nurzahputra (Universitas Negeri Semarang, Indonesia), Budi Prasetyo (Universitas Negeri Semarang, Indonesia)	141

<i>Gamified Mobile Micro-learning Framework: A Case Study of Civil Service Management Learning</i>	
Deno Norsanto (Institut Teknologi Bandung, Indonesia), Yusep Rosmansyah (Bandung Institute of Technology, Indonesia)	146
<i>Model Development Of Students' Scholarship Status At First Asia Institute Of Technology And Humanities (FAITH)</i>	
Jonalyn Joy Labayne (Technological Institute of the Philippines, Philippines), Jheanel Estrada (Technological Institute of the Philippines, Philippines), Lester Lanto Mercado (Technological Institute of the Philippines, Philippines)	152
<i>CEW-DTW: A New Time Series Model For Text Mining</i>	
GuanDong Zhang (University of Western Ontario, Canada), Hao Yu (University of Western Ontario, Canada), Lu Xiao (Syracuse University, USA)	158
<i>Introducing TAMEx Model for Availability of E-Exam in Wireless Environment</i>	
Gede Sukadarmika (University of Udayana, Indonesia), Linawati Linawati (Universitas Udayana, Indonesia), Nyoman Putra Sastra (Electrical Engineering Universitas Udayana, Indonesia)	163

Parallel Session 2-C

<i>Design and Implementation of an Experimental UAV Network</i>	
Prabhu Jyot Singh (Central Queensland University, Sydney, Australia), Rohan de Silva (CQUniversity Sydney, Australia)	168
<i>Intrusion Detection Against Unauthorized File Modification by Integrity Checking and Recovery with HW/SW Platforms Using Programmable System-On-Chip (SoC)</i>	
Mochamad Julianto S (Institut Teknologi Bandung, Indonesia), Rinaldi Munir (Institut Teknologi Bandung, Indonesia)	174
<i>Reliable Geographic Routing Protocol for Vehicular Ad-hoc Networks under Shadowing and Multipath Environments</i>	
Reena Kasana (Jawaharlal Nehru University, India), Sushil Kumar (Jawaharlal Nehru University, New Delhi, India)	180
<i>An Improved Message Capacity and Security using Divide and Modulus Function in Spatial Domain Steganography</i>	
De Rosal Ignatius Moses Setiadi (Dian Nuswantoro University, Indonesia), Heru Agus Santoso (Dian Nuswantoro University, Indonesia), Eko Hari Rachmawanto (Dian Nuswantoro University, Indonesia), Christy Atika Sari (Dian Nuswantoro University, Indonesia)	186
<i>Simple and Secure Image Steganography using LSB and Triple XOR Operation on MSB</i>	
Yani Parti Astuti (Dian Nuswantoro University, Indonesia), De Rosal Ignatius Moses Setiadi (Dian Nuswantoro University, Indonesia), Eko Hari Rachmawanto (Dian Nuswantoro University, Indonesia), Christy Atika Sari (Dian Nuswantoro University, Indonesia)	191
<i>Protection Coordination Using Zone Selective Interlocking and Neural Network Method in Plan IEEE 9 Bus</i>	
Rachmad Pujiantara (Institut Teknologi Sepuluh Nopember & Institut Teknologi Sepuluh Nopember, Indonesia)	196

<i>Power Flow Control of Battery Energy Storage System Using Droop Voltage Regulation Technique Integrated with Hybrid PV/Wind Generation System</i>	
Andri Pradipta (Institut Teknologi Sepuluh Nopember, Indonesia), Dedet Riawan (Institut Teknologi Sepuluh Nopember, Indonesia), Soedibyo Soedibyo (Institut Teknologi Sepuluh Nopember, Indonesia)	202

Parallel Session 2-D

<i>Complex-Valued Support Vector Machines Based on Multi-Valued Neurons</i>	
Motonobu Hattori (University of Yamanashi & Interdisciplinary Graduate School of Medicine, Engineering and Agriculture, Japan)	208
<i>Reduction of Catastrophic Forgetting for Multilayer Neural Networks Trained by No-Prop Algorithm</i>	
Motonobu Hattori (University of Yamanashi & Interdisciplinary Graduate School of Medicine, Engineering and Agriculture, Japan)	214
<i>Design and Development Smart Industrial Training Management Software with Artificial Neural Network (ANN) on Java</i>	
Efan Ntyo (Gajah Tunggal Polytechnic, Indonesia), Muhammad Ridwan Arif Cahyono (Gajah Tunggal Polytechnic, Indonesia)	220
<i>Deep Reinforcement Learning for Recommender Systems</i>	
Isshu Munemasa (Meiji University, Japan), Yuta Tomomatsu (Meiji University, Japan), Kunioki Hayashi (DesignOne Japan, Inc., Japan), Tomohiro Takagi (Meiji University, Japan)	226
<i>Application of Analytic Hierarchy Process (AHP) and Simple Additive Weighting (SAW) Method In Singer Selection Process</i>	
Afrianda Cahyapratama (Institut Teknologi Sepuluh Nopember, Indonesia), Riyanarto Sarno (Institut Teknologi Sepuluh Nopember, Indonesia)	234
<i>Back Propagation Neural Network Experiment on Team Matchmaking MOBA game</i>	
Evawaty Tanuar (Bina Nusantara University, Indonesia)	240
<i>Optimizing Time and Cost using Goal Programming and FMS Scheduling</i>	
Shoffi Sabilla (Institut Teknologi Sepuluh Nopember, Indonesia), Riyanarto Sarno (Institut Teknologi Sepuluh Nopember, Indonesia), Yutika Amelia Effendi (Institut Teknologi Sepuluh Nopember, Indonesia)	244
<i>Classification Algorithm for Edible Mushroom Identification</i>	
Agung Wibowo (STMIK Nusa Mandiri Sukabumi, Indonesia)	250

Parallel Session 3-A

<i>QoS and RMA Performance Analysis for Wireless Mesh Network Implementation</i>	
Ahmad Fauzan Aji (Universitas Sebelas Maret, Indonesia), Puspanda Hatta (Universitas Sebelas Maret, Indonesia), Endar Wihidayat (Sebelas Maret University, Indonesia)	254

<i>Comparison of Discrete Event Simulation and Agent Based Simulation for Evaluating the Performance of Port Container Terminal</i>	
Aziz Fajar (Institut Teknologi Sepuluh Nopember, Indonesia), Riyanarto Sarno (Institut Teknologi Sepuluh Nopember, Indonesia), Abd. Charis Fauzan (Institut Teknologi Sepuluh Nopember, Indonesia)	259
<i>Evaluation of the Performance of a Machine Learning Algorithms in Swahili-English Emails Filtering System Relative to Gmail Classifier</i>	
Rashid Abdulla Omar (Institute Teknologi Sepuluh Nopemba & ITS, Indonesia), Ir. Aris Tjahyanto (Institute Teknologi Sepuluh Nopember, Indonesia)	266
<i>Improving the Quality of Enterprise IT Goals using COBIT 5 Prioritisation Approach</i>	
Firman Anindra (Universitas Nasional & BINUS University, Indonesia)	270
<i>Metrics Analysis of Risk Profile: A Perspective on Business Aspects</i>	
Prajna Deshanta Ibnugraha (Telkom University & Universitas Gadjah Mada, Indonesia), Lukito Edi Nugroho (Universitas Gadjah Mada, Indonesia), Paulus Insap Santosa (Universitas Gadjah Mada, Indonesia)	275
<i>Civil Servant Behaviors Performance Evaluation: Combining DEAHP and 360-degree Feedback</i>	
Irfani Zuhurfillah (University of Diponegoro, Indonesia), Farikhin Farikin (Diponegoro University, Indonesia), R Rizal Isnanto (Diponegoro University, Indonesia)	280
<i>Evaluation of Container Forecasting Methods for Analyzing Port Container Terminal Performance Using Agent-Based Simulation</i>	
Ryan Setiawan (Institut Teknologi Sepuluh Nopember, Indonesia), Riyanarto Sarno (Institut Teknologi Sepuluh Nopember, Indonesia)	286
<i>Risk and Countermeasure Analysis of Network-based Global Airplane Tracking System</i>	
Zhijun Wu (Civil Aviation University of China, P.R. China), Xuan Liu (Civil Aviation University of China, P.R. China), Akhmad Dahlan (Universitas Amikom Yogyakarta, Indonesia)	292

Parallel Session 3-B

<i>Taxpayer Compliance Classification Using C4.5, SVM, KNN, Naive Bayes and MLP</i>	
M. Jupri (Institut Teknologi Sepuluh Nopember, Indonesia), Riyanarto Sarno (Institut Teknologi Sepuluh Nopember, Indonesia)	297
<i>Classification on Passion Fruit's Ripeness using K-Means Clustering and Artificial Neural Network</i>	
Sitti Wetenriajeng Sidehabi (Politeknik ATI Makassar, Indonesia), Ansar Suyuti (Hasanuddin of University, Indonesia), Intan Sari Areni (Hasanuddin University, Indonesia), Ingrid Nurtanio (Hasanuddin University, Indonesia)	304
<i>Data Level Approach for Imbalanced Class Handling on Educational Data Mining Multiclass Classification</i>	
Yoga Pristyanto (Universitas Gadjah Mada, Indonesia), Irfan Pratama (Universitas Gadjah Mada, Indonesia), Anggit Ferdita Nugraha (Universitas Gadjah Mada, Indonesia)	310
<i>Machine Learning: Fisher Fund Classification using Neural Network and Particle Swarm Optimization</i>	
Arifin Tindi (Universitas Diponegoro, Indonesia)	315

<i>Robustness of Classical Fuzzy C-Means (FCM)</i> Bahrul Ilmi Nasution (Sekolah Tinggi Ilmu Statistik, Indonesia), Robert Kurniawan (Sekolah Tinggi Ilmu Statistik, Indonesia)	321
<i>Additive Survival Least Square Support Vector Machines and Feature Selection on Health Data in Indonesia</i> C. Khotimah (Institut Teknologi Sepuluh Nopember & LPDP, Indonesia), Santi Wulan Purnami (Sepuluh Nopember Institute of Technology, Indonesia), Dedy Dwi Prastyo (Institut Teknologi Sepuluh Nopember, Indonesia)	326
<i>Optimization of Forecasted Port Container Terminal Performance Using Goal Programming</i> Shabrina Choirunnisa (Institute of Technology Sepuluh Nopember, Indonesia), Riyanarto Sarno (Institut Teknologi Sepuluh Nopember, Indonesia), Abd. Charis Fauzan (Institut Teknologi Sepuluh Nopember, Indonesia)	332

Parallel Session 3-C

<i>River Body Extraction And Classification Using Enhanced Models of Modified Normalized Water Difference Index At Yeh Unda River Bali</i> Putu Virga Nanta Nugraha (Gadjah Mada University & Gadjah Mada University, Indonesia), Sunu Wibirama (Universitas Gadjah Mada, Indonesia), Risanuri Hidayat (Gadjah Mada University (UGM), Indonesia)	337
<i>Real-time motion tracking for dance visualization using Kalman filters</i> Karina Abramova (IT University of Copenhagen, Denmark), Andrea Corradini (Copenhagen School of Design and Technology, Denmark), Andrea Corradini (Copenhagen School of Design and Technology, Denmark)	343
<i>Global Features Selection for Dynamic Signature Verification</i> Ano Rahardika (Sepuluh Nopember Institute of Technology, Indonesia), Aris Tjahyanto (Sepuluh Nopember Institute of Technology, Indonesia)	348
<i>3D Human Face Reconstruction Using Depth Sensor of Kinect 2</i> Ratha Siv (Universitas Gadjah Mada & UGM, Indonesia), Igi Ardiyanto (Universitas Gadjah Mada & Faculty of Engineering, Indonesia), Rudy Hartanto (Gadjah Mada University & Electrical Engineering and Information Technology Departmen, Faculty of Engineering Gadjah Mada University, Indonesia)	355
<i>Leaves Image Synthesis Using Generative Adversarial Networks With Regularization Improvement</i> Muhammad Eka Purbaya (University of Gadjah Mada, Indonesia), Noor Akhmad Setiawan (Universitas Gadjah Mada, Indonesia), Teguh Bharata Adji (Universitas Gadjah Mada, Indonesia)	360

Abstract—There are many object-oriented software quality measurement techniques. One of them is CK metric. This paper utilizes CK metrics to measure qualities per version of an open source software namely Statcato. Measurements are done in each class, each version of the software. The measurement is used to analyze the quality of the software. This paper concludes that the quality of software has improved during its lifecycle, although its features increase.

Keywords— *object-oriented software metric; chidamber-kemerer metric; software quality; Software measurement; Software Size*

I. INTRODUCTION

In software engineering, there are at least two concepts of developing software, which are traditional and object-oriented. Software development using Object Oriented concept has become popular. It facilitated the developers to build and maintain their software products easily since it is reusable, secure, and efficient as it decreases the size of system and number of logical constructs [1].

The more complex the software is developed, the harder it becomes to measure the quality. Software metrics are required to measure the quality of the developed software and also to estimate the cost and effort of software projects [2]. Radjenović, et. al. concluded that object-oriented metrics 49% were used, compared to traditional source code metrics in 27% or process metrics in 24% [3]. There are many existing object-oriented software metrics [4]. One of measurement metrics was developed by Chidamber and Kemerer [5], which is often called as CK metrics suite [6]. This is called as metric because it is an indicator of system performance [7].

CK metrics suite were most widely referred and used by researchers [1], [3]. It was used in half of the 106 studies that Radjenović, et. al. did [3]. CK metrics has been recognized by numerous studies in which said that these metrics were effective at measuring the concepts they represent [6], [7], [8], [9] and as the backbone for object-oriented design metric [10].

Today, open source software becomes popular and important in many applications, such as scientific and business. Many companies use this software in their own

work. Open source software was developed with different management style than the industrial, the quality and reliability of the code have to investigated [11].

One of open source software is Statcato, an open source and Java-based application which is naturally an Object-Oriented Software. It requires Java Runtime Environment (JRE) 1.6 or higher. Once any machine has Java installed, whether the computer runs Windows, Mac, Linux, or UNIX, it can be run [12]. The aim of this study is to evaluate Statcato to investigate the quality of this software during its lifecycle. The calculated metric values for various releases are used as a basis to evaluate the software quality of Statcato. We use Spinellis's tool namely CKJM to calculate CK metrics [13]. It is a great tool for this purpose.

II. RELATED WORKS

Gupta, et. al. in [7] reviewed some of metrics for measuring Object Oriented software and gave conclusion that software metrics always was always needed to the performance of the system. Malhotra & Khanna in [14], studied the relationship between Object Oriented metrics and the vulnerability of open source software classes based on Java. Ferreira, et. al. in [4] provided a threshold definition for a set of object-oriented software metrics. They argued that the use of metrics for software quality measurement was less effective because many studies did not specifically investigate the threshold for object-oriented software metrics. This threshold can be applied to other metric software. Benlarbi, et. al. in [15] provided a threshold on the CK metric to make it easier to interpret the measurements. They had experiment on object-oriented in C++. Malhotra & Bansal in [9] built predictive models to identify software parts which have a high probability of generating errors. They calculated the threshold values of CK metrics by using a statistical model derived from logistic regression. Shaik, et. al. in [1] did assessment in Object Oriented design and found that there were many metrics to measure software quality, but CK metrics was the most widely used. Subramanyam & Khisanan in [16] provided empirical evidence that supported the role of Object-Oriented complexity metrics in determining software defects, particularly CK metrics. Yadav, et. al. [17] did analyze CK

metrics and their impact on object-oriented software. Suresh, et. al. in [6] argued that CK metrics were used to compute the system reliability, also gave an idea for future study about applying neural network to predict system reliability using CK metrics. Shawky & Abd-El-Hafiz in [8] utilized CK metric as one of their metrics to study some metrics that related to the quality of the generated code affected by development methodology, especially in agile approach. Suri and Singhal in [10] experimentally analyzed the influence of CK metric in object-oriented classes. Singh in [18] used CK metrics as one of metrics to measure the quality per version of open-source software namely JFreeChart. Some study utilized CKJM tool to calculate the CK metrics of the classes are in [9], [10], [13], [19], [20], [21].

III. CHIDAMBER & KEMERER METRICS

Chidamber and Kemerer (CK) metrics used to measure object oriented software. It consist of 6 metrics which are calculated for each class in Object-Oriented software, which are: WMC, DIT, NOC, CBO, RFC and LCOM.

A. WMC (Weighted Method per Class)

The more methods in class, the more specific the class becomes. It also affects the derived class because it will inherit all of those methods. Keep WMC value low. It is because when WMC value is high, the class is harder to reuse and maintain [6], [7], [11], [18], [20]. WMC value must be less than 25 although it is still acceptable if it is more than 25 (but less than 40) [22].

B. DIT (Depth of Inheritance Tree)

The deeper the class hierarchy, the greater the number of methods inherited so that the class becomes more complex. However, it also becomes increasingly potential for inherited reuse methods. It affects the quality of the software directly as it increases reusability and the complexity at the same time [6], [7], [11], [18], [20]. The value 0 of DIT shows "root". If the DIT value is 2 or 3, it indicates higher usage. The DIT value of less than 2 can be said to be less good, in terms of advantage using object-oriented design and inheritance. On the other hand, a DIT value that is greater than 5 will provide high complexity, but it is expected from object-oriented design [22]. Suri & Singhal, however, in [10] said that all classes must inherit from existing class, so the DIT value, at least, is 1.

C. NOC (Number Of Children)

Increasing children classes means increasing reuse classes, which means the greater of abstraction of the parent class. Therefore, more testing is required [6], [7], [11], [18], [20]. There is no "good" or "bad" value for the NOC. The value becomes important if the class has a high value for other metrics. The complexity of the class will be passed to all child classes and the entire system [22].

D. CBO (Coupling Between Object Classes)

An increase of CBO indicates decreasing of class reusability, so this values should be kept as low as possible

[6], [7], [11], [18], [20]. CBO values should be less than 5. High values of CBO indicate that classes are difficult to understand, reuse or maintain. The higher value of CBO indicates that classes are more sensitive to change in other sections of design. Therefore, this makes maintenance more difficult. Low CBO values make the class easier to understand, less prone to spawning errors, encourage encapsulation and increase modularity [22].

E. RFC (Response For a Class)

RFC measures the number of methods that are invoked to respond messages received by an object. It shows how many classes communicate with other classes. The greater the number of classes giving the method, the greater the complexity of the class [6], [7], [11], [18], [20]. RFC value should be less than 50. If the RFC is high, the complexity increases and class becomes elusive [22].

F. LCOM (Lack of Cohesion in Method)

Cohesion is the extent to which methods are interconnected with one another. High LCOM values imply that classes are better divided into two or more separate classes, so it will keep LCOM value low [6], [7], [11], [18], [20].

IV. ANALYSIS METRICS

CKJM tools are used to collect data from all classes in Statcato software and we calculate the mean of it as show in Table 1. By calculating the mean of data, we intend to show the movement of software development from version to version.

TABLE I. MEAN VALUES OF METRICS FOR VARIOUS RELEASES OF STATCATO

Version	Metric	WMC	DIT	NOC	CBO	RFC	LCOM
0.91		3.884	0.974	0.018	2.681	15.03	70.37
0.92		4.309	0.932	0.932	2.832	18.35	59.34
0.93		4.341	0.945	0.029	2.835	18.75	65.38
0.94		4.228	0.933	0.022	2.825	18.8	52.09
0.95		4.379	0.952	0.032	2.833	18.21	70.97
0.96		4.388	0.95	0.03	2.83	18.2	70.61
0.97		4.395	0.948	0.03	2.838	18.29	70.65

0.99		4.381	0.944	0.028	2.825	18.16	71.89
0.910		4.38	0.943	0.03	2.821	18.11	72.54
0.911		4.357	0.941	0.03	2.83	18.13	74.2
0.912		4.368	0.931	0.026	2.817	18.58	67.2
1.0		4.368	0.931	0.026	2.817	18.58	67.21
1.01		4.368	0.931	0.026	2.817	18.59	67.21
1.02		4.39	0.935	0.026	2.851	18.72	67.59

A. WMC (Weighted Method per Class)

Fig. 1 shows that WMC is starting stable on version 0.95 upwards. In a negative view, the software does not have significant development. Positively, the software is close to stable for further development. In [23], it does seem that not many new features are developed.

B. DIT (Depth of Inheritance Tree)

In the data that has been collected in Table 1, mean values of DIT are close to 1, in fact if mode and median are calculated and rounded then value of both of them is 1. Therefore, it can be concluded that DIT in this case is 1 and satisfies [10]. Fig. 2 shows the changes internal software for DIT. It appears that the trend is decreasing which indicates the class is less complex. Less complex class means easier to maintenance but less reusable.

C. NOC (Number Of Children)

Fig. 3 shows that NOC is starting stable on version 0.93 upwards. Referring to WMC metric above, in negative view, the software does not have significant development, or in

positive view, the software is close to stable for further development.

D. CBO (Coupling Between Object Classes)

Fig. 4 shows that CBO is starting stable on version 0.95 upwards. The highest value of CBO is less than 4. It satisfies [22], so classes easy to understand and easy to maintain.

E. RFC (Response For a Class)

Fig. 5 shows that CBO is starting stable on version 0.94 upwards. Referring to WMC and NOC metric above, in negative view, the software have not significant development,

but positively, the software is close to stable for further development.

F. LCOM (Lack of Cohesion in Method)

Fig. 6 shows that LCOM value is decreased since version 0.912. It means that developers care about the cohesion for a better development.

V. CONCLUSION

We can say that the quality of the latest version of Statcato is better than the predecessor, although the feature is increasing. It can be summarized that in positive view, the value of WMC, NOC, and RFC metrics is stable, which is a good condition. While DIT and CBO metrics show ease to maintain and LCOM metric indicates developer concerns. Therefore, it can be concluded that Statcato has good quality and has a good development to continue improving during its lifecycle, although its feature is increasing. For future works, we recommend to calculate the threshold per metric to better clarify the assessment of the metrics.
